

4th May 2013

CONSTRUCTION UPDATE – SYDNEY PORT BOTANY TERMINAL 3

Works Undertaken

Construction activities that have taken place on the Terminal 3 site during April 2013 are outlined below:

- Noise wall construction has continued and expected to be complete in the coming months
- Paving across the western portions of the site has continued to allow delivery of the automated stacking cranes to the Terminal 3 site
- Electrical substation and drainage works are continuing including installation of the Stormwater Quality Improvement Devices (SQIDs)
- Services works have proceeded across the site which encompasses electrical, and potable water infrastructure
- Concrete batch plant and paving operations have continued and undertaken some night works during April. All night works have been assessed as inaudible at residential areas by an independent consultant. Monitoring will continue during any required night works. The benefits of having this plant on site is the ability to keep concrete trucks off the surrounding road networks and avoid impacting local residents and road users.

Installation of one of the Terminal 3 Stormwater Quality Improvement Devices - SQIDs

Coming Up

Laing O'Rourke will continue with the current work activities listed above. Noise wall panels are expected to be installed in the next two months once the piling foundations are completed.

Project Information

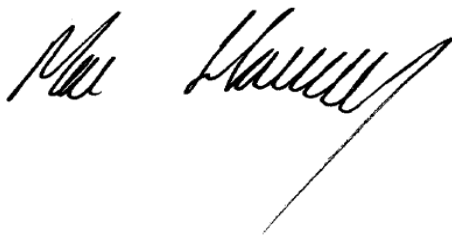

Further information regarding the SPBT3 project can be found on the Hutchison Ports Australia website as shown in the contact details below. Project information will be updated throughout the project to reflect the relevant stages of work.

Contact Details

Laing O'Rourke is committed to providing ongoing information about any works on site. For further information please use the contacts shown below.
