

7<sup>th</sup> January 2012

## CONSTRUCTION UPDATE – SYDNEY PORT BOTANY TERMINAL 3

### Works Undertaken

Work activities that have taken place during December 2012 are outlined below:

- Precast concrete facilities have continued for drainage and electrical works
- Ground improvement and earthworks on the reclaimed land are continuing to allow paving and concrete works to proceed in 2013
- Installation of Stormwater Quality Improvement Devices (SQIDs) has continued
- Drainage headwalls are being installed along the Botany Bay side of the site that will be connected to the drainage system when the terminal becomes operational
- Installation of the project concrete batching plant has begun. This batch plant will be utilised to minimise deliveries and limit impacts to surrounding roads
- We are trialling a new dust suppression agent that is made from natural, citrus by-products. This product has been applied to stockpiles and unused areas to minimise dust being generated from the site.

## Coming Up

Laing O'Rourke will continue with the current work activities listed above. Concrete paving is set to commence on site in February 2013.

## Project Information

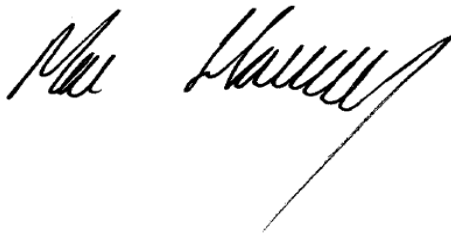

Further information regarding the SPBT3 project can be found on the Hutchison Ports Australia website as shown in the contact details below. Project information will be updated throughout the project to reflect the relevant stages of work.

## Contact Details

Laing O'Rourke is committed to providing ongoing information about any works on site. For further information please use the contacts shown below.
